A. Gene Discovery Breakdown for Top 20 Complex Traits
B. Population Discovery Proportions (%)
Disease or Trait
Height
Hematological traits (multi-trait analysis)
Height (baseline)
Educational attainment
Body mass index
Bone mineral density mean
Systolic blood pressure
Smoking initiation
Physical function (baseline)
Type 2 diabetes
Protein quantitative trait loci (liver)
Diastolic blood pressure
Metabolite levels
GLIPR1 protein levels
Platelet count
Red blood cell count
Heel bone mineral density
Metabolic syndrome
Body shape phenotype PC2
Pulse pressure
